

Enliten is a team of video, media and technology experts who collectively and effectively work toward solving our clients' day-to-day and long-term challenges

Enliten Associate

Jurgen Dannwolf, Senior Technologist

Jurgen has more than 30 years of experience in telecommunications and video communications, including fiber optic and microwave research. Jurgen is the Chief Technical Officer of Corporate Broadcast Services and Associate with the Enliten Management Group.

Jurgen brings to Enliten extensive engineering experience in the research and design of emerging video technologies and communications delivery solutions.

Jurgen is member of Enliten's Training team, specializing in the areas of digital video fundamentals and IPTV for the enterprise – providing timely and critical information in both a technical and topical approach (for the non-technical audience).

Prior to joining Corporate Broadcast Services, Jurgen was the Director of Service Engineering for Loral Space and Communications, where he managed the worldwide engineering staff and payload for the company's satellite fleet.

As a Distinguished Member of the AT&T Bell Laboratories, Jurgen was responsible for the conception, development and implementation of the VistaCast Business Television Service. This was the first major service in the United States that made use of Digital Video Compression technology, featuring a home channel and software system that managed conditional authorization of satellite receivers (forced tuning) and transmission services.

Jurgen earned his bachelor and master of Science degrees in Electrical Engineering from Monmouth University.
